# Project Report: Bank Transaction Analysis Dashboard

**Name:** Prachi Singh
**Tool Used:** Microsoft Excel

## 1. Problem Statement

Banks and financial institutions record a large number of daily customer transactions. However, raw transaction data is difficult to interpret. The objective of this project is to analyze customer spending patterns across gender, age groups, payment methods, categories, cities, and merchants. This analysis helps in better understanding customer behavior and provides insights for business decision-making.

## 2. Data Source

- The dataset is a dummy dataset created manually in Microsoft Excel.
- Dataset contains fields: Transaction Date, Customer Name, Age Group, Gender, City, Merchant, Payment Mode, Spend Category, Amount.

## 3. Dashboard Overview (Charts Included)

- Gender-wise Total Spending
- Age Group-wise Total Spending
- Category-wise Total Spending
- Payment Mode Percentage Share
- Spend Category Distribution (High/Medium/Low)
- City-wise Transaction Count with Trendline
- Day-wise Total Spending
- Merchant-wise Total Spending

## 4. Key Insights

1. The majority of spending is done by customers in the 26–35 age group.
2. Amazon is the top merchant with the highest overall spending.
3. NetBanking is the most preferred mode of payment, followed by UPI.
4. Spending is highest in the Shopping category, compared to Food and Travel.
5. Mid-week days (Wednesday & Thursday) show the highest transaction volumes.
6. Customers from Delhi and Mumbai contribute to the majority of transactions.
